

MATHS AND MUSIC

Maths Rocks!

Pythagoras was an important Greek philosopher and mathematician who lived around 2,500 years ago. He is credited with discovering that musical notes could be expressed in mathematical form. In the years since, many composers have used maths to help write really cool music.

Maths is also important for many jobs in the music industry such as sound engineers, stage design and construction and organisers of concerts.

Maths and Musical Patterns

Maths and music might seem like two different things, but they are actually closely connected in many interesting ways! Music is made up of patterns of rhythms and sounds. Since maths is all about patterns, it helps us understand and create music.
