

Containers

The elves are preparing their special and very secret New Year's Eve drink.

They are preparing it in different containers: three bottles fit in one jar, six jars fit in five jugs, and eight jugs fit in four cans.

$$3 \text{ bottles} = 1 \text{ jar}$$

$$6 \text{ jars} = 5 \text{ jugs}$$

$$8 \text{ jugs} = 4 \text{ cans}$$

How many bottles could you fill with 20 cans?
